

EVC Monta Platform

What is Monta Platform?

Monta is an all-in-one EV charging app developed by a Danish tech-focused startup. They were inspired by the boredom of the fragmented EV market and cumbersome charging apps. Currently, the Monta team offers smart charging for sustainable energy supply and lower charging rates - the most advanced smart charging algorithm to date.

Advantages of Monta Platform

1. Not only can people use the charging points themselves, but they can also set them up as public charging points and rent them out to other EV procedures or share them with anyone driving an EV.

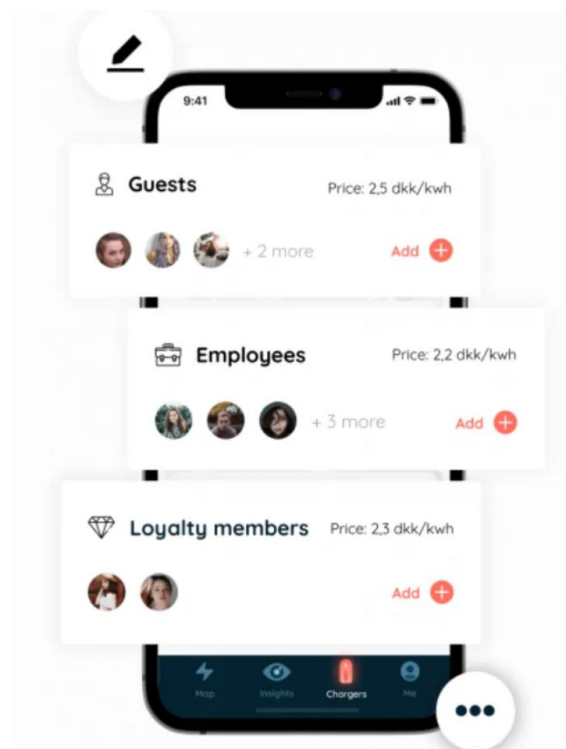

Figure 1 Share Function of Monta

2. Monta is also involved in a number of service sectors including hotels, restaurants, car parks and businesses. Simply connect Monta to your personal or company equipment and the electric vehicle can be charged easily.

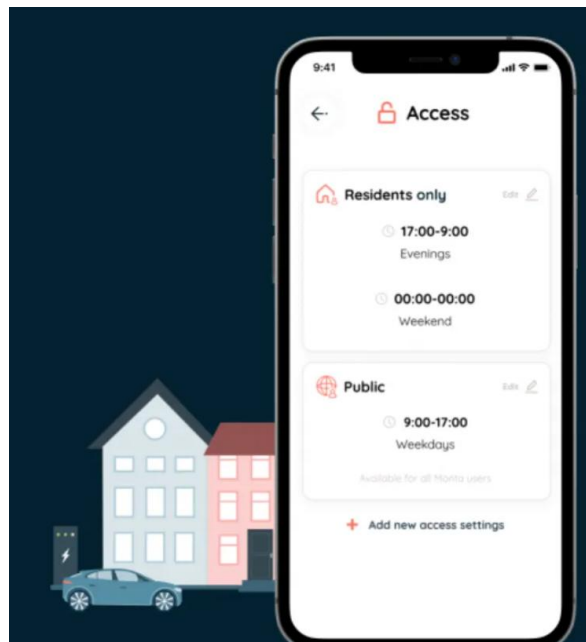

Figure 2 Cross-industry Function of Monta

3. Easy management of charging points: 1. Provide charging points to attract tourists and gain new sources of income. 2. 100% digital solution without any manual management. 3. Provide different prices for different segments of electric vehicles. 4. Access to charging points and extended users at any time through a management system.

4. Corporate Social Responsibility. Get more value from your charging points by deeply analyzing your customers' charging statistics and tracking their energy consumption with the smart charging algorithms of the Monta app platform. 1. use renewable energy 2. reduce CO2 footprint 3. save on electricity costs

5. One-stop shop for customers. With Monta you get a proven solution to seamlessly manage customer charge points, pricing, payment and access levels, and user usage. 1. Add or remove charge point users as needed. 2. Determine pricing per kilowatt hour. 3. Arrange the location of private and public charge points. 4. Manage all electric vehicles in the system.

Who can use the platform

1.For Operators

For the operators choose Monta platform, they can directly connect their equipment to Monta platform for operation and management without complicated matching.

2.For end-users

Customers can also use Monta APP to share and rent EV Charger.

1. You can share the EV Charger with your neighbors or friends;
2. You can also set the EV Charger as a public EV Charger for charging when it is idle.

How to bind the device

How to control in the Monta Platform

Support application scenarios:

home charging scenarios

Sharing Function Description:

Through the OCPP protocol to access the EV Charger to the platform in the idle time to set the EV Charger to share the charge to the owner of the car using the service.

Note: To start OCPP function, you need to connect the meter.
