

Electricity Price Strategy of C&I Storage Cloud Platform

Electricity Price Strategy

The electricity price strategy refers to users being able to create multiple electricity price templates on the industrial and commercial storage cloud platform, so that they can be used at any time according to different occasions, as shown in the figure below. These electricity price strategies are used to calculate specific profits and design intelligent algorithms to provide users with strategy recommendations.

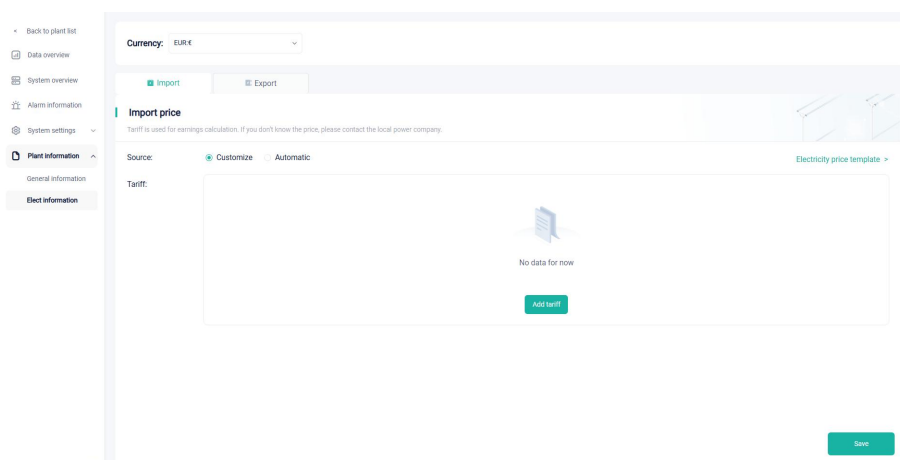

The screenshot shows the 'Export template list' interface. On the left is a sidebar menu with options: Overview, Monitoring, Analysis, O&M, Application (selected), and User. The main area has tabs for 'Import' and 'Export'. Below the tabs is a search bar for 'Template name' and an '+ Add a template' button. A table lists two templates:

Number	Template name	Currency	Tariff type	Remarks	Operation
1	尖峰电价	AUD \$	TOU (weekdays + weekends)	已得已得数据解决	Detail Edit Delete
2	分时电价	EUR €	TOU		Detail Edit Delete

At the bottom right of the table, there is a pagination control showing 'Total: 2', a page number '1' in a box, and '10 / Page'. There is also a 'Go to' input field.

Figure 1 Electricity Price Template

The screenshot shows the 'Import price' interface. On the left is a sidebar menu with options: Back to plant list, Data overview, System overview, Alarm information, System settings, Plant information (selected), General information, and Elect information. The main area has tabs for 'Import' and 'Export'. Below the tabs, there is a 'Currency' dropdown set to 'EUR €'. A note states: 'Tariff is used for earnings calculation. If you don't know the price, please contact the local power company.' There are two tabs for 'Source': 'Customize' (selected) and 'Automatic'. A link 'Electricity price template >' is visible. Under the 'Tariff:' label, there is a large empty box with a message 'No data for now' and an 'Add tariff' button. A 'Save' button is at the bottom right.

Electricity Price Acquisition Mode

The electricity price acquisition modes are divided into two types: import electricity price acquisition mode and export electricity price acquisition mode. The import electricity price acquisition mode includes custom and automatic acquisition methods. The custom method allows users to apply templates, specifically including Time-Of-Use(TOU) electricity price, Time-Of-Use(TOU) electricity price

(weekdays + weekends), and fixed electricity price. The export electricity price acquisition mode mainly includes custom, automatic acquisition, and non-selling methods. The custom method is similar to the import electricity price acquisition mode. Currently, only some countries (as shown in the table below) have the function of automatically obtaining electricity prices.

Table 1 Countries with automatic electricity pricing

Country Name(Country Code)	Delivery Areas
Austria(AT)	AT
Belgium(BE)	BE
Germany(DE)	DE,DE-LU,50Hz,AMP,TTG,TBW
Denmark(DK)	DK,DK1,DK2
Estonia(EE)	EE
Finland (FI)	FI
France (FR)	FR
United Kingdom(GB)	UK,GB1,GB
Lithuania (LT)	LT
Luxembourg(LU)	DE-LU
Latvia (LV)	LV
Netherlands (NL)	NL
Norway(NO)	NO,NO1,NO2,NO3,NO4,,NO5
Poland (PL)	PL,PLC
Sweden(SE)	SE,SE1 ,SE2,SE3,SE4

Specific Setup Steps for Web

1. Electricity Price Template

First, go to the website <https://www.solaxcloud.com/user-center/> to access the login page of the cloud platform (as shown in the figure below). Then enter the C&I storage account, click Log in, and complete the platform login.

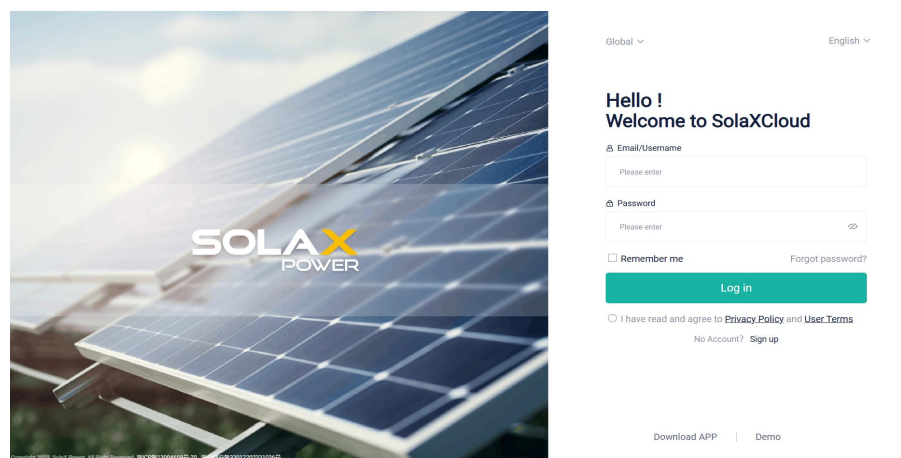

Figure 3 Login Page of the Cloud Platform

Next, click on the 'Application' in the menu bar on the homepage, and then click on the 'Electricity price template' to enter the electricity price setting interface(as shown in the figure below).As indicated by label 1, Import represents the setting for import electricity prices, and Export represents the setting for export electricity prices. Label 2 indicates that we can add a new template by clicking here.

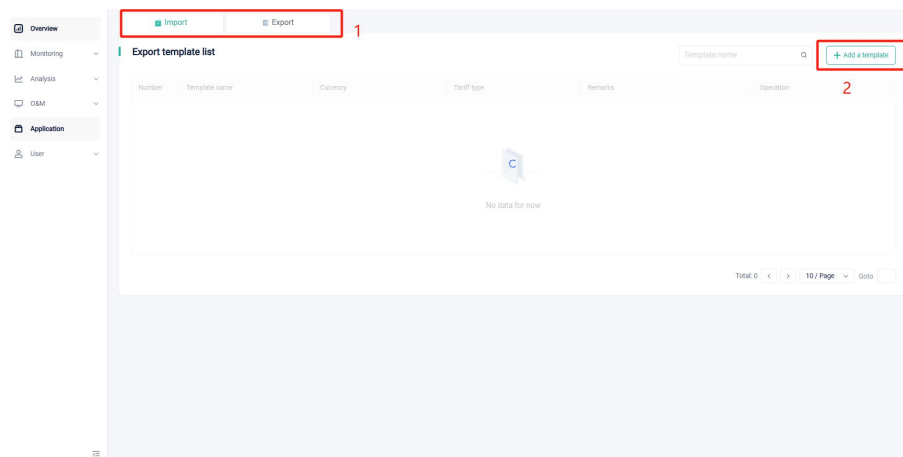

Figure 4 Electricity Price Setting Interface

After we click add a template button,We can customize and set our electricity price template.

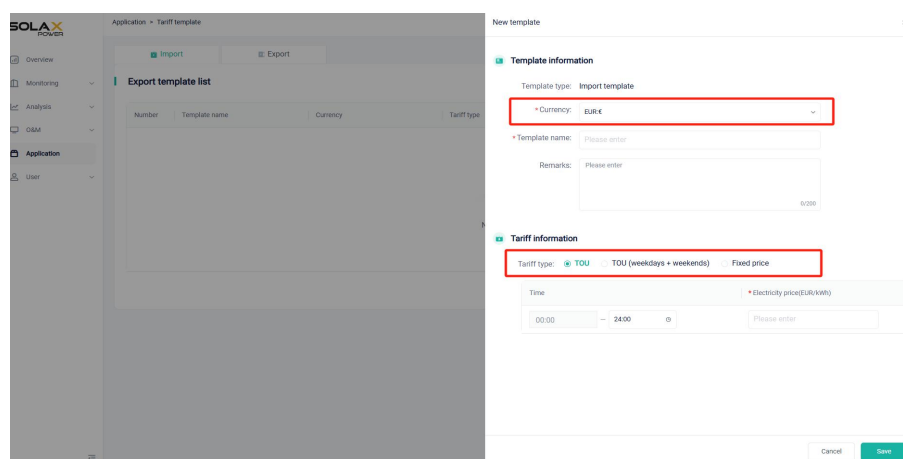

Figure 5 Electricity Price Setting Interface

In the electricity price template setting of the international version industrial and commercial storage platform, the currency is editable, and the Time-Of-Use(TOU) electricity price is distinguished between weekdays and weekends.

2. Electricity Price Setting

After the electricity price template is set up, you can enter the corresponding power station to set specific electricity prices. The path to enter is to click Monitoring on the homepage, select Plant list, and then click on the power station that needs to be set to enter the electricity price setting interface.And then click the Elect information in the Plant information.The related pictures are showing as follows.

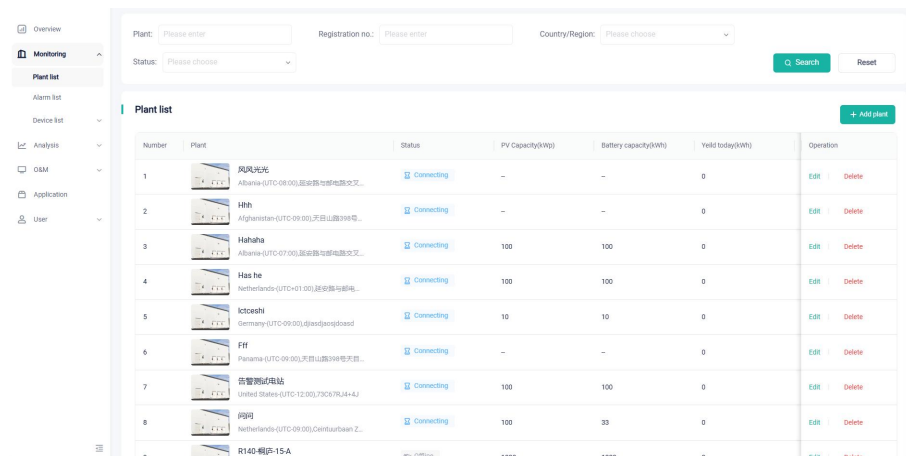

Figure 6 Power Plant Entrance Interface

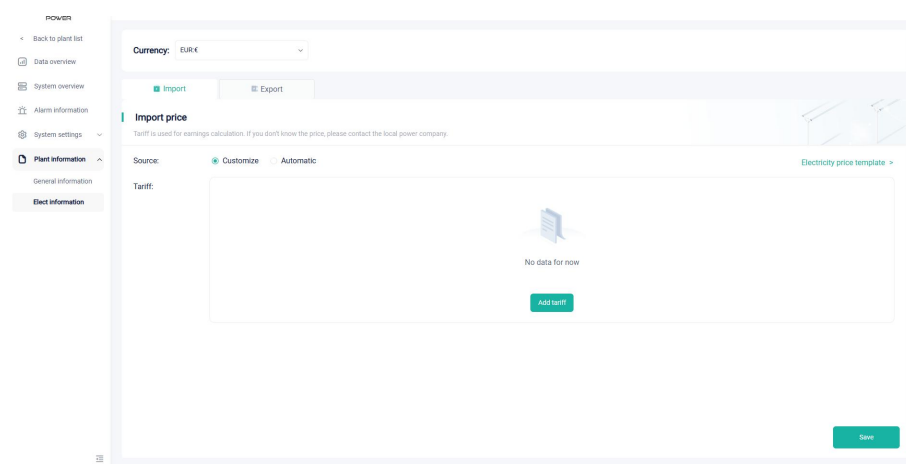

Figure 7 Electricity Price Setting Interface

After we click add tariff,we can access the interface where we can set the electricity price for the plant station.

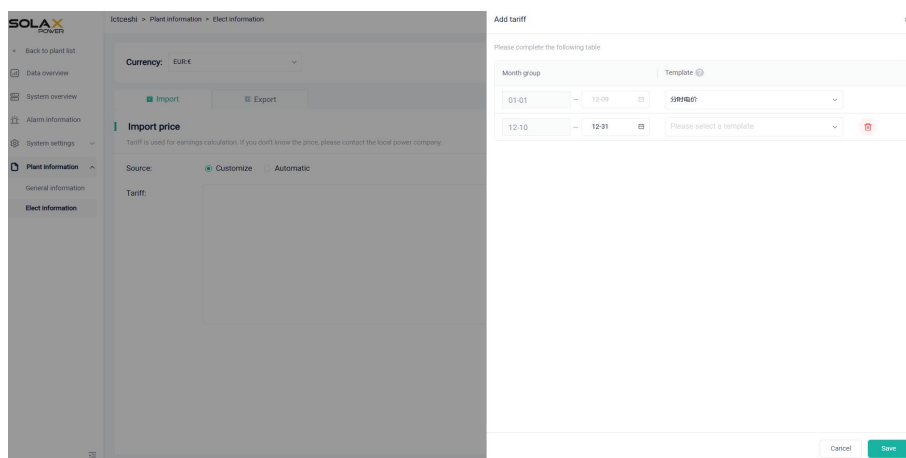

Figure 8 Electricity Price Setting for Power Station

The electricity price is set to custom settings by default, which means that users can import previously configured templates during the setting process. Users can choose a pricing template that is the same as the currency unit of the power station. The date follows an auto-complete mode, similar to the time configuration in the electricity price template. After setting the electricity price, click save to complete the setting for the power station electricity price.

Specific Setup Steps for App

1. Electricity Price Template

First, download the SolaXCloud App to access the login page of the cloud platform (as shown in the figure below). Then enter the C&I storage account, click Log in, and complete the platform login.

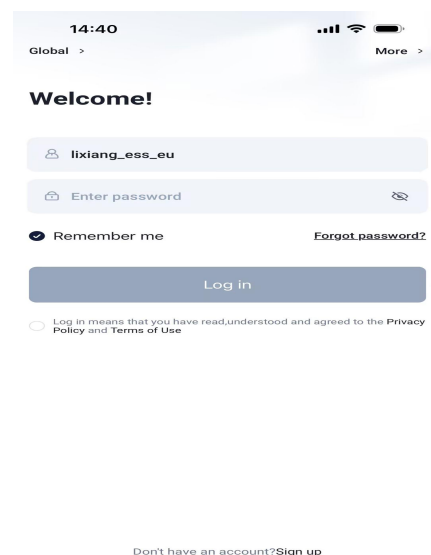

Figure 9 Login Page of the Cloud Platform(App)

Next, click on the 'Application' in the menu bar at the bottom, and then click on the 'Electricity price template' to enter the electricity price setting interface (as shown in the figure below). As indicated by label 1, From grid represents the setting for import electricity prices, and To grid represents the setting for export electricity prices. Label 2 indicates that we can add a new template by clicking here.

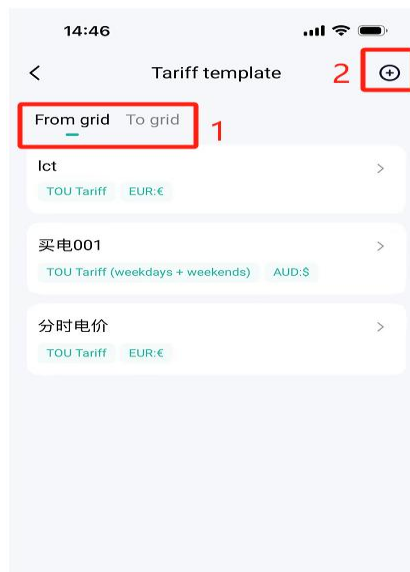

Figure 10 Electricity Price Setting Interface(App)

After we click add button,We can customize and set our electricity price template.

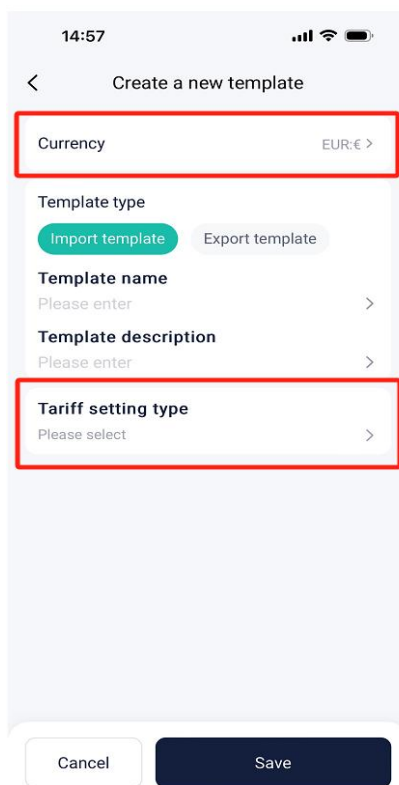

Figure 11 Electricity Price Setting Interface(App)

2. Electricity Price Setting

After completing the electricity price template,click the Plant button at the bottom menu to select the power station you want to set the electricity price,and then click the Tariff configuration button to set the electricity price for the corresponding power station.The picture is showing as follows.
