Account

Issue introduction

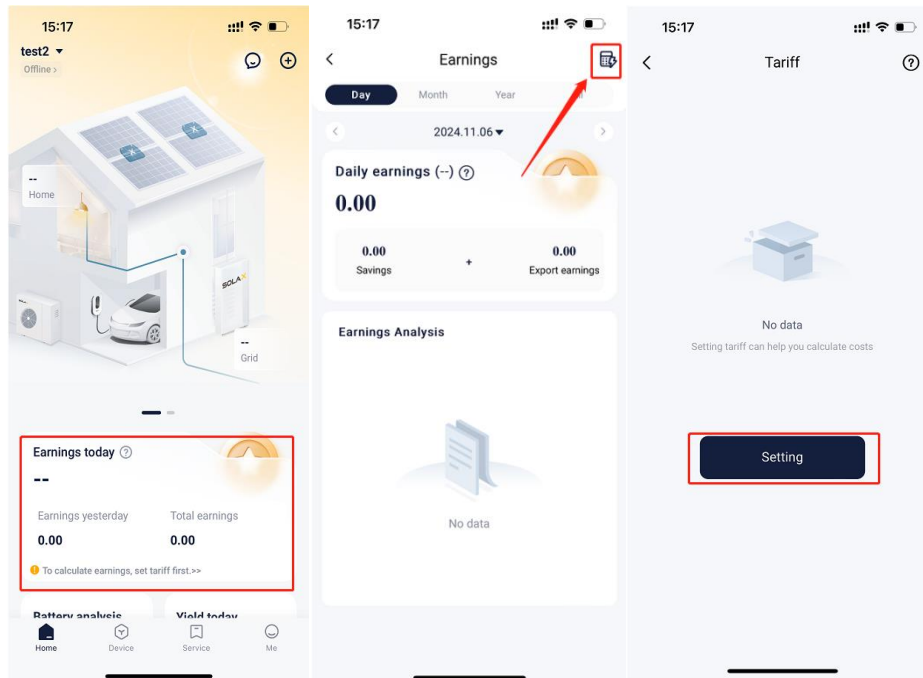

Set the price of the electricity.

Operation guidance

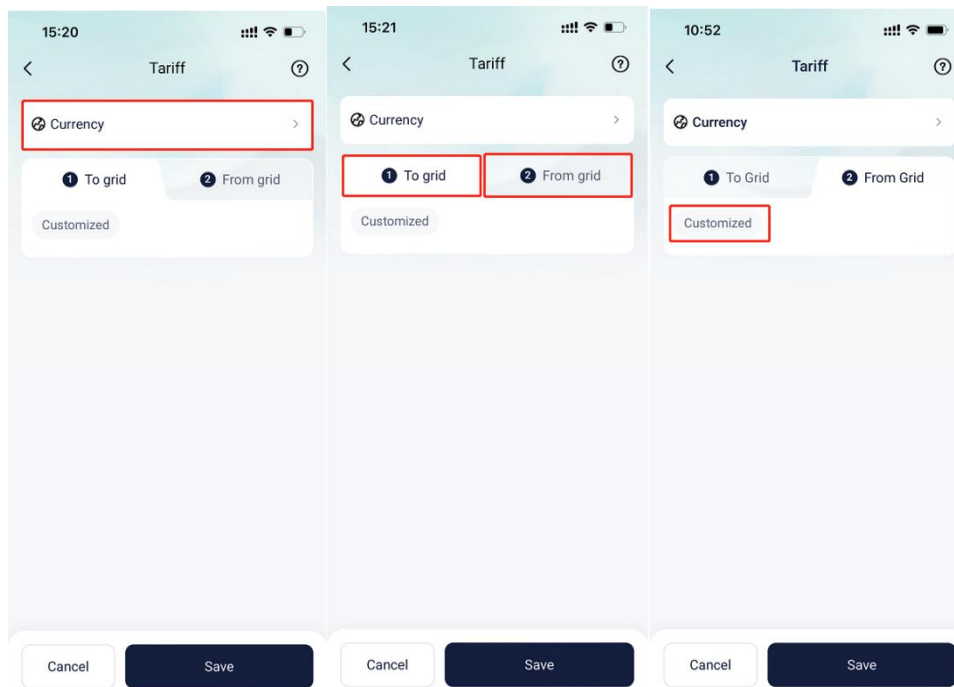

Step1: Go to <tariff> and tap on “Setting”

Setting path: *Earnings today*→*Tariff*→*setting*.

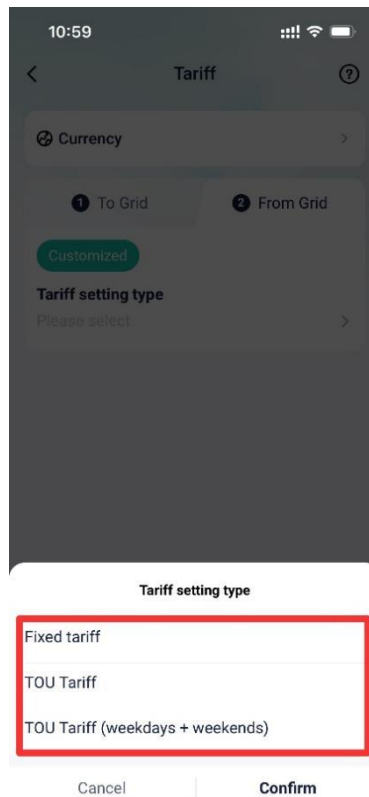

Step2: Choose the currency and choose “To grid” or “from grid” , Then tap on “Customized

Setting path: *Currency→To grid/From grid→Customized.*

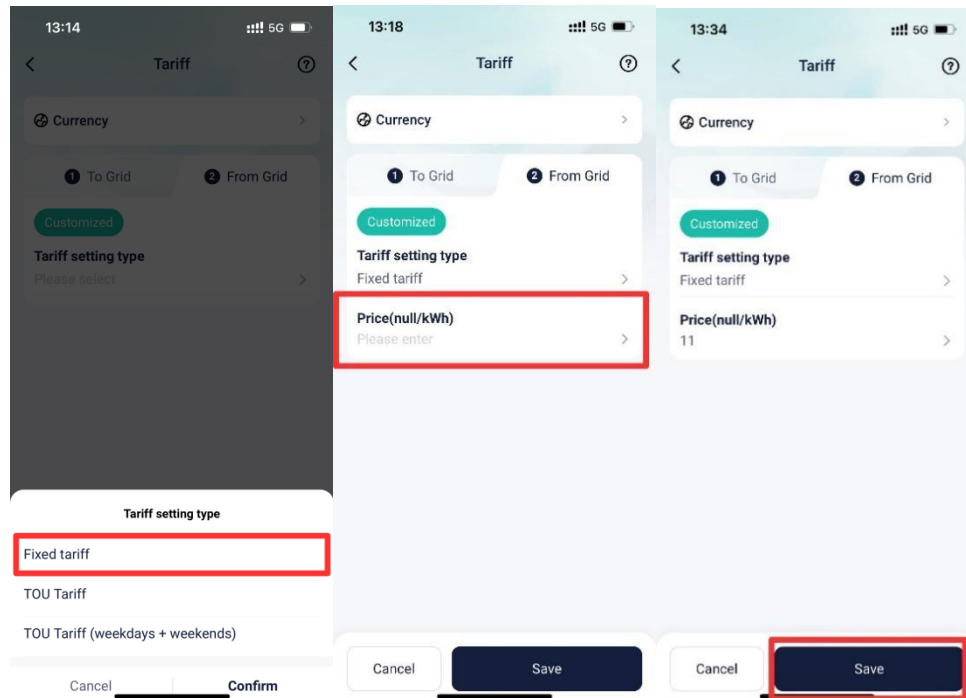

Step3: Tap on “Tariff setting type”, then there will be these three options.

Situation1 <If you want to set a fixed price throughout the year.>

Choose Fixed tariff, then enter the price and save the settings.

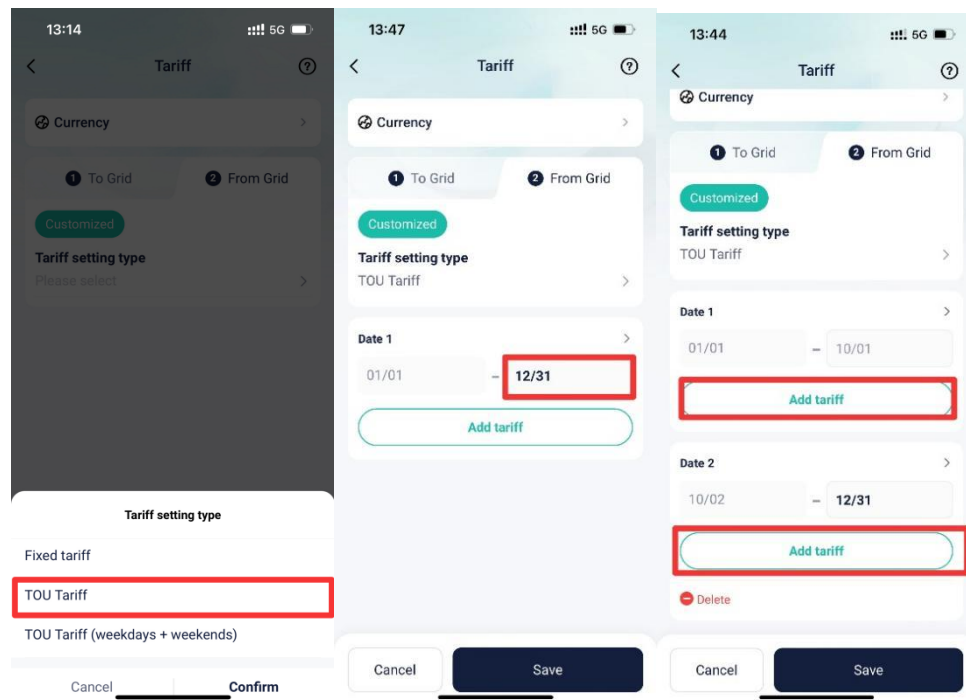

Setting path: *Tariff setting type* → *Fixed tariff* → *Price* → *Save*.

Situation2 < If the electricity price varies by time period, changing across different seasons, different days, and even at different times of the day.>

Step1: Choose TOU tariff, then separate time periods by days based on calendar.

Setting path: *Tariff setting type* → *TOU tariff* → *Date* → *Add tariff*.

Step2: After tapping on “Add tariff”, set electricity prices for different time periods each day.

Setting path: *Time period*→*Enter price*→*Save*.

The first screenshot (13:50) shows the 'Time 1' section with a time range from 00:00 to 24:00. The '24:00' is highlighted with a red box. Below it is a field labeled 'Please enter price' with a '/kWh' unit. The second screenshot (13:51) shows the 'Time 2' section with a time range from 08:00 to 24:00. The '24:00' is highlighted with a red box. Below it is a field labeled 'Please enter price' with a '/kWh' unit. The third screenshot (13:45) shows the 'Tariff' settings page. It has tabs for 'To Grid' and 'From Grid', with 'Customized' selected. Under 'Tariff setting type', 'TOU Tariff' is selected. It shows two date ranges: 'Date 1' from 01/01 to 10/01 with rates of 8 (/kWh) and 11 (/kWh), and 'Date 2' from 10/02 to 12/31 with rates of 9 (/kWh) and 12 (/kWh). The 'Save' button at the bottom right is highlighted with a red box.

Situation3 < If you want to choose TOU tariff, and the main differences in electricity prices occur between weekdays and weekends.>

Step1: Choose TOU Tariff (weekdays + weekends), then separate time periods by days based on calendar.

Setting path: *Tariff setting type*→*TOU tariff(weekdays + weekends)*→*Date*→*Add tariff*.

The first screenshot (13:14) shows the 'Tariff' settings page. Under 'Tariff setting type', 'TOU Tariff (weekdays + weekends)' is selected and highlighted with a red box. The second screenshot (14:17) shows the 'Date 1' section with a date range from 01/01 to 12/31. The '12/31' is highlighted with a red box. Below it is a button labeled 'Add tariff'. The third screenshot (14:17) shows the 'Date 2' section with a date range from 10/02 to 12/31. Below it is a button labeled 'Add tariff', which is highlighted with a red box. The 'Save' button at the bottom right is highlighted with a red box.

Step2: After tapping on “Add tariff”, for weekends and workdays, set electricity prices for different time periods each day.

Setting path: *Weekdays/Weekends* → *Time period* → *Enter price*.

The image displays three sequential screenshots of a mobile application interface for configuring electricity tariffs. Each screen shows a date range of 01/01-10/01 and options to 'Cancel' or 'Confirm'. The first screenshot highlights the 'Weekends' tab. The second screenshot shows 'Time 1' set from 00:00 to 24:00. The third screenshot shows 'Time 2' set from 08:00 to 24:00. Red boxes indicate the 'Weekends' tab, the '24:00' time selection, and the 'Please enter price' input fields.

Remember to enter prices for all time periods of weekdays and weekends, otherwise there will be a prompt saying “Please input the correct price!”.

The image shows a mobile application interface for setting electricity tariffs. The 'Workdays' tab is selected. The 'Time 1' period is set from 00:00 to 08:00 with a price of 10 /kWh. The 'Time 2' period is set from 08:00 to 24:00 with a price of 14 /kWh. A red box highlights the 'Workdays' tab. A black warning box with a red exclamation mark and the text 'Please input the correct price!' is overlaid on the 'Time 2' section.

Step3: Save the settings.

Actual export price/KWH = Exporting price – Handling fee.

*Handling fee: Cost required to export electricity

Actual import price/KWH = (Import price + Distribution fee) * (1 + Tax rate)

* Distribution fee: Grid infrastructure fee

* Tax rate: Cost percentage for electricity import

Please note

- If the setting fails, please check your mobile network, ensure a stable connection, log out of your account, and then log back in. Follow the steps above to make the changes.
